# A Compelling Theoretical Model

# A Compelling Theoretical Model

Simply explain why spuriousness and reverse causation make little theoretical sense.

# A Compelling Theoretical Model

Simply explain why spuriousness and reverse causation make little theoretical sense.

- Could it be that some other variable causes both democratic institutions and GNI? What might this be?
- Could it be that GNI causes democratic institutions?

# Randomization

# What is the effect of a campaign mailer on a citizen's decision to turn out and vote?

\* Last Day to Register to VOTE is **MARCH 28<sup>th</sup>!**

\* PA Primary Election is **April 26<sup>th</sup>**

\* PA General Election is **November 8, 2016**

**In 2016 YOUR Vote Will Help To Elect:**

- THE PRESIDENT OF THE UNITED STATES
- PA UNITED STATES SENATOR
- PA ATTORNEY GENERAL
- PA AUDITOR GENERAL
- PA STATE TREASURER
- PA REPRESENTATIVES IN CONGRESS (DISTRICTS 2, 4, 7, 8, 13)
- PA SENATOR IN GENERAL ASSEMBLY (DISTRICTS 1, 11)
- PA REPRESENTATIVES IN THE GENERAL ASSEMBLY (DISTRICTS 26, 53, 61, 70, 131, 146, 147, 148, 149, 150, 151, 152, 153, 154, 157, 166, 172, 194)
- DELEGATE TO THE NATIONAL CONVENTION (DEMOCRATIC & REPUBLICAN)
- ALTERNATIVE TO THE NATIONAL CONVENTION (DEMOCRATIC & REPUBLICAN)

Montgomery County, PA  
**Valerie Ward/Branch President**

Imagine we're in the following **ideal situation**:

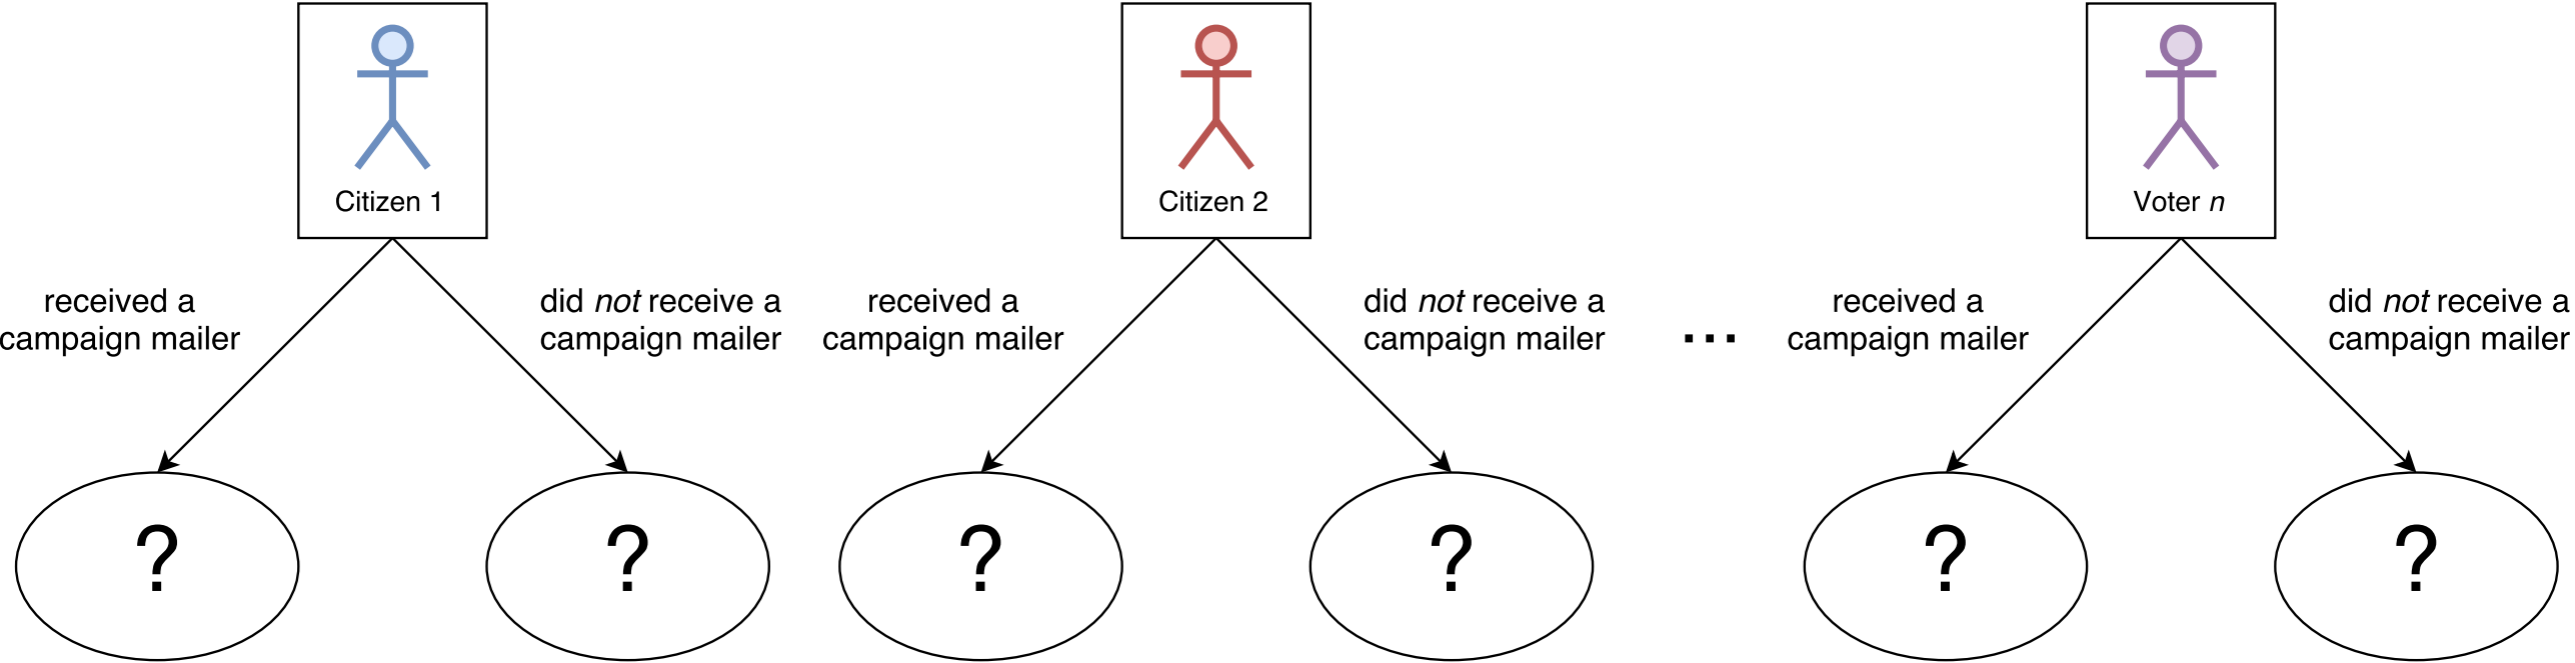

- A. we have  $n$  potential voters,
- B. the election hasn't yet happened, and
- C. we can control the assignment of the treatment.

$R_T^{hyp}$ : The hypothetical turnout Rate if everyone was in the Treatment group.

$R_C^{hyp}$ : The hypothetical turnout Rate if everyone was in the Control group.

$R_T^{hyp} - R_C^{hyp}$ : average treatment effect (ATE)

$R_T^{obs}$ : The observed turnout Rate in the Treatment group.

$R_C^{obs}$ : The observed turnout Rate in the Control group.

$$R_T^{obs} - R_C^{obs} \approx R_T^{hyp} - R_C^{hyp}$$

$R_T^{obs}$ : The observed Rate in the Treatment group.

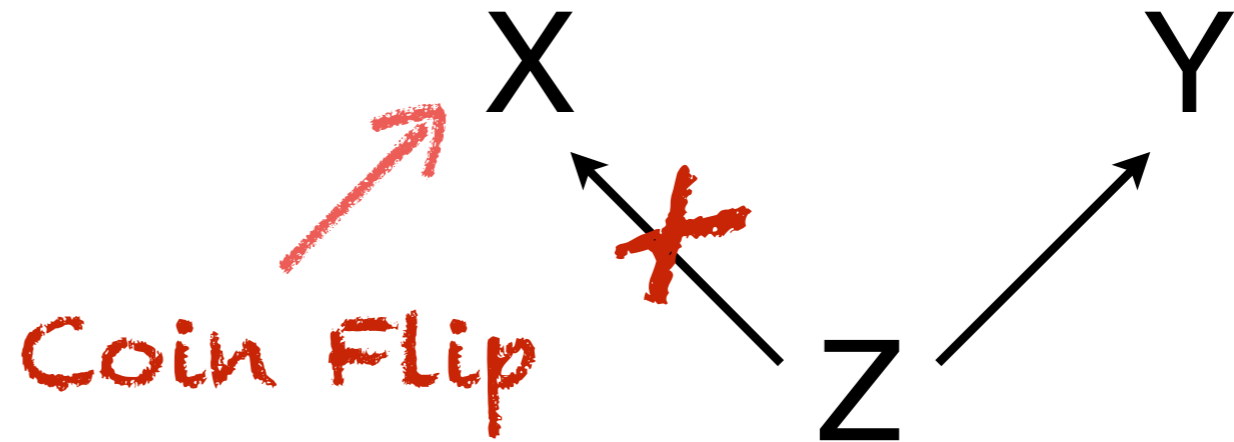

$R_C^{obs}$ : The observed Rate in the Control group.

$$\underbrace{R_T^{obs} - R_C^{obs}}_{\text{estimate}} \approx \overbrace{R_T^{hyp} - R_C^{hyp}}^{\text{ATE}}$$

	Experimental Group				
	Control	Civic Duty	Hawthorne	Self	Neighbors
Percentage Voting	29.7%				
N of Individuals	191,243				

Dear Registered Voter:

DO YOUR CIVIC DUTY AND VOTE!

Why do so many people fail to vote? We've been talking about this problem for years, but it only seems to get worse.

The whole point of democracy is that citizens are active participants in government; that we have a voice in government. Your voice starts with your vote. On August 8, remember your rights and responsibilities as a citizen. Remember to vote.

DO YOUR CIVIC DUTY — VOTE!

**TABLE 2. Effects of Four Mail Treatments on Voter Turnout in the August 2006 Primary Election**

	Experimental Group				
	Control	Civic Duty	Hawthorne	Self	Neighbors
Percentage Voting	29.7%	31.5%			
N of Individuals	191,243	38,218			

Dear Registered Voter:

**YOU ARE BEING STUDIED!**

Why do so many people fail to vote? We've been talking about this problem for years, but it only seems to get worse.

This year, we're trying to figure out why people do or do not vote. We'll be studying voter turnout in the August 8 primary election.

Our analysis will be based on public records, so you will not be contacted again or disturbed in any way. Anything we learn about your voting or not voting will remain confidential and will not be disclosed to anyone else.

**DO YOUR CIVIC DUTY — VOTE!**

**TABLE 2. Effects of Four Mail Treatments on Voter Turnout in the August 2006 Primary Election**

	Experimental Group				
	Control	Civic Duty	Hawthorne	Self	Neighbors
Percentage Voting	29.7%	31.5%	32.2%		
N of Individuals	191,243	38,218	38,204		

Dear Registered Voter:

## WHO VOTES IS PUBLIC INFORMATION!

Why do so many people fail to vote? We've been talking about the problem for years, but it only seems to get worse.

This year, we're taking a different approach. We are reminding people that who votes is a matter of public record.

The chart shows your name from the list of registered voters, showing past votes, as well as an empty box which we will fill in to show whether you vote in the August 8 primary election. We intend to mail you an updated chart when we have that information.

We will leave the box blank if you do not vote.

DO YOUR CIVIC DUTY—VOTE!

Dear Registered Voter:

## WHAT IF YOUR NEIGHBORS KNEW WHETHER YOU VOTED?

Why do so many people fail to vote? We've been talking about the problem for years, but it only seems to get worse. This year, we're taking a new approach. We're sending this mailing to you and your neighbors to publicize who does and does not vote.

The chart shows the names of some of your neighbors, showing which have voted in the past. After the August 8 election, we intend to mail an updated chart. You and your neighbors will all know who voted and who did not.

# Review Exercises

1. I write that, under randomization,  $R_T^{obs} - R_C^{obs} \approx R_T^{hyp} - R_C^{hyp}$ 
  - A. What do each of these four quantities refer to? What do we call the left-hand side? The right-hand side?
  - B. Notice that the equality is not exact. Instead, it is approximate. What is the only reason it is not exact?
  - C. Explain why randomization allows us to rule out spuriousness and reverse causation.
2. Describe the design of Gerber and Green's turnout experiment. Describe the results (i.e., what percent of each group voted?). Discuss whether you can rule out any of the four possible ways to obtain a correlation.
